

### **The Expansion of the Sante Fe Railroad is Just the Beginning**

It has been four years since the invention of telephone. During this time, many railroads have expanded and many new railroads put on schedule, connecting to more people and benefiting many people. Just the past week, the Sante Fe Railroad has expanded, connecting Kansas to San Marcial, New Mexico.

In October first, the Sante Fe Railroad had opened up a new route, from the southwestward of Kansas to San Marcial in Mexico. This new route had brought many benefits to the country as well as the people. One of the passengers from New Mexico had spoke to our reporter and he believes that the opening of the new railroad helps many people. He stated, "The open of the new railroad had benefit everyone, it only takes couple hours to get to Kansas, which help me a lot as well as the other."

This expansion of the railroad brings a lot of advantages to the people and the government believes that it's just the start of the bigger expansion. "The expansion of railroads isn't just going to stop, more and more railroads will be expanding due to the invention of telegraph and telephone," said the head of the railroad department. "The invention of the telegraph and the telephone had connected people from the West to the people at the South, this trend will keep on expanding because the rapid growth of the railroad. This also lead to the expanding of telephone poles, and one day, telephone will be a common thing in the every house." Said, Alexander Graham Bell.

Alexander Graham Bell's prediction has come true. Just a couple days after the expansion of the railroad, our reporter has found out that there is a locomotive that carries ten

wagons of wood trunks and wires to New Mexico. The locomotive stops at every ninety feet and planted a wood trunk. Linking the connection of telephone and telegraph from Kansas to New Mexico. People tried to call from Kansas to New Mexico and it work all right.

The expansion of railroad and communication is happening at the same time. When the railroad expands, the communication range will expand as well, more and more unknown areas will be discovered and more and more railroads will be linking to the different cities. In the future, we will be seeing more and more railroads expand, and it will eventually be like a normal thing. One day, the railroad will be all over the United States and everyone is able to travel from one end to the other end and communicate through the telephone to the ones that is far away from them.
